

THiNK Academy Overview

THiNK Academy is the official learning and certification platform for the THiNK Reseller Program. It provides a structured learning experience that equips partners with the technical knowledge, practical skills, and professional standards required to successfully deploy THiNK AI solutions. The Academy combines self-paced learning, live technical sessions, hands-on projects, mentorship, and assessments to ensure that every reseller is prepared for real-world client engagements.

The learning experience is designed around competency-based progression, allowing participants to develop foundational AI knowledge before advancing to solution development and deployment. Throughout the program, learners have access to course materials, recorded lectures, coding exercises, project templates, technical documentation, discussion forums, and mentor support.

Training is delivered through a blended learning model consisting of:

- Self-paced online learning modules
- Live instructor-led workshops
- Interactive coding demonstrations
- Practical assignments and capstone projects
- Community discussions and peer learning
- Technical mentorship sessions

THiNK Academy emphasizes learning by doing. Rather than focusing solely on theory, participants are expected to build, test, and deploy AI solutions using the same technologies employed in production environments. Upon completion of the required learning pathway, participants become eligible for certification and assignment to client implementation projects.
